WHIPLASH

Dr. Kenneth Burle, D.C.

Whiplash most commonly occurs when the head is suddenly jerked back and forth beyond its normal limits such as car accidents and traumatic slips and falls. The resulting instability of the spine and soft tissues can result in headaches, dizziness, blurred vision, pain in the shoulder, arms and hands, reduced ability to turn and bend, and even low back problems. As the body attempts to adapt, symptoms may not appear for weeks or even months later. Chiropractic adjustments restore proper motion and position on spinal bones. If caught early enough, inflammation can be reduced and scar tissue can often be minimized. Dr. Burle has successfully treated patients with whiplash.

Bar manager says man brandished weapon

A man pointed a gun at a bar manager when the manager asked him to turn down his vehicle's radio, according to police.

The manager of Peppers, on State Road 135 in Greenwood, called police at 3:14 a.m. Sunday after the motorist pointed what looked to be a semiautomatic handgun at him, shouted obscenities and drove away, according to police.

The suspect is described as a white male with a thin mustache, about 29 years old, 5-foot-8 and 170 to 180 pounds.

Johnson County sheriff's deputies searched for the vehicle but did not find it.

Those extra inches around your waist
can be as life threatening as stage II cancer.

While any excessive weight gain is dangerous to your health, weight around the middle concerns doctors the most. In fact, if you're a woman with a 37" waist or a man with a 40" waist, the risk to your health may be equal to someone with stage II cancer. Other serious weight-related problems include diabetes, heart disease, osteoarthritis, asthma and infertility. Fortunately, though, there is something you can do about it. Our Bariatric Care Center provides weight management treatments that range from noninvasive, self-directed programs to surgical options.
